

## How to Measure Your Wires:

It is very important that whether you are sending us your specific wire set to copy, or are sending us your specifications, that you follow either of the 2 methods below.

### **METHOD 1 – Sending us the specs and not the set**

Measure starting from the distributor side of the wire. Start by measuring from the center of the distributor terminal. As you go down the length of the wire and get to the spark plug boot, there are 2 ways to finish measuring, depending on the type of spark plug boot you have.

#### **90° plug boots:**

Finish measuring to the center of the terminal.

#### **180°/ 135° plug boots:**

Finish measuring to the **END** of the **TERMINAL** inside the boot.

**NOTES:** *We are not responsible for making incorrect sets based on your measurements.*

### **Method 2: - Sending us your set**

If you are in doubt, send your wire set to us. We will make you an exact fit to the specs of the set you send us. If you want a length different than the set you send, simply attach to the specific lead you want changed; a piece of masking tape, with the written amount you want to add or subtract. (Example: +2 or -2). Any additional changes, IE: boot changes; please mark on another piece of masking tape and attach to the specific lead you want changed.

You will have your new set along with your old set returned within 10 working days. Fill out the form on [www.customwiresets.com](http://www.customwiresets.com) then Print a copy of your Confirmation receipt and include it in the package.

**NOTES:** *We are not responsible for making incorrect sets based on your changes. Please make & mark your changes as clearly as possible.*

### **Send your set to:**
